

Medbox Ship's Pharmacy[®]

an integrated and logistic service concept

Concept

The MedBox concept, is a break through for distribution, storage and control of the Medical Chest. The tool of the MedBox Medical Care System is a container containing all medicines and medical supplies required for the number of crew according to international flag state regulations.

How does it work?

The MedBox program guarantees that the ship's Medical Chest always will be updated.

1. Eliminates all on board work routines with the Medical Chest inventory.
 2. Eliminates all on board and land based organisation administration work.
 3. Eliminates visits from local port pharmacy for on board inspection, exchange and dispose of expired articles.
 4. Medbox is cost effective.
-
